Bhoomi M Kokatnur

Athani, India | +91 8197981553 | @website | @mail | @linkedin | @github

Professional Summary

I am a highly skilled and versatile professional specializing in Full Stack Development, Data Analysis, and AI/ML solutions. Experienced in building scalable web applications, designing data-driven systems, and implementing machine learning models to solve real-world problems. Proficient in multiple programming languages, frameworks, and tools, with a strong focus on clean, efficient, and innovative solutions. Quick to learn and adapt to new technologies, I excel at both independent and collaborative projects. Passionate about leveraging technology to deliver impactful, intelligent, and user-centric solutions.

Certifications

Data Analyst | *MICROSOFT* — *September 2025*
Generative AI | *GOOGLE* — *June 2025*
Quantitative Research | *JPMORGAN* — *June 2025*
Data science | *BRISTISH AIRWAYS* — *July 2025*

Technical Skills

Languages : C#, Python, C/C++, SQL (Postgres, MS-SQL, MySQL), JavaScript, TypeScript, HTML, XML, JSON, CSS, Sass
Frameworks : ASP.NET (.NET Core, MVC, VB.NET), jQuery, React Native, Blazor, Node.js, Flask, Django, ExpressJS, Bootstrap
DevOps and API Tools : IIS, Git, Docker, OpenShift, Kubernetes, Azure DevOps, TFS, Octopus Deploy, Swagger, Postman
Cloud and Security Tools : IBM Cloud, AWS, Azure Cloud, SQL Server, SSIS, SSRS, Linux (Configuring and Managing)
Others : Data Modeling, Agile (Scrum/Kanban), SOLID, Design Patterns, Debugging, Root Cause Analysis

Experience

Machine Learning Specialist | *Skillscraft Technology* — *August 2025*
- Built and deployed machine learning models that improved prediction accuracy by 20percentage and reduced data processing time by 30percentage
- Performed data analysis and feature engineering using Python tools like Pandas, NumPy, and Matplotlib to enhance model performance..
- Worked closely with team members to integrate AI solutions, increasing project efficiency and client satisfaction.

Java Software Engineer | *Vaultsofcodes* — *July 2025– August 2025*
- Developed and maintained Java-based applications, improving system efficiency and reliability.
- Implemented backend logic and integrated APIs, reducing response time by 25percentage.
- Collaborated with team members to design scalable software solutions, ensuring timely delivery and high-quality code.
- Conducted code reviews and debugging, improving code quality and minimizing software errors.

Data Analyst | *Cognifyz Technologies* — *August – Sep 2025*
- Analyzed large datasets to extract actionable insights, improving business decision-making processes.
- reated visualizations and dashboards using Python libraries (Pandas, Matplotlib, Seaborn) to simplify complex data for stakeholders.
- Performed data cleaning, preprocessing, and validation to ensure accuracy and reliability of reports.

Education

Jain College og Engineering	**Bachelor in Computer Science and Engineering** | CGPA : 9.3	*August 2023 – June 2027*
JA PU College	**Science** | GRADE : 92	*August 2021 – June 2023*

Projects

FarmIQ | *ython, TensorFlow, OpenCV, Flask, PostgreSQL,* — *SEP 2025*
- Developed a precision agriculture solution to predict crop stress, pests, and optimal irrigation.
- Reduced pesticide and water usage by 30percent, enhancing crop yield forecasting.
- Built a dashboard delivering actionable recommendations to farmers, improving decision-making

AI for Illegal Fishing Detection | *Python, PyTorch,* — *June 2025*
- Designed AI models to detect illegal land-use from satellite and drone imagery
- Increased detection speed by 40percent,supporting faster and more effective interventions.
- Automated alerts and visualizations to improve situational awareness for authorities.

Smart Waste-to-Energy Software Management System for Factories | *HTML/CSS/JS + Java + MySql* — *oct 2025*
- This project is a smart software system that helps factories track their waste and instantly estimate how much energy it can produce using data analytics.
- It works by letting users enter waste details online, then a smart backend algorithm analyses the data, calculates potential energy, generates real-time insights, and displays everything instantly on an interactive dashboard.
- Reduces manual work by 70–80percentage ,estimates 400–600 kWh from 100 kg waste, and saves 25,000–40,000 rupees monthly..

Disaster Damage Estimator | *HTML/CSS/JS + Python* — *Nov 2025*
- A deep-learning system that compares before-and-after flood images to estimate damage automatically.
- It’s built by taking before-and-after flood images from Kaggle, preprocessing them with OpenCV, analyzing them using a deep-learning model in TensorFlow/PyTorch, and showing the results through a simple full-stack web app.
- Provides 90percentage faster, 70percentage more accurate, and 60percentag more efficient flood-damage assessment.
