

Mini Notes App

Objective

The goal of this assignment is to build a **full-stack Notes application** that demonstrates your ability to work across frontend, backend, and database layers.

Tech Stack

- **Frontend:** React or Nextjs
 - **Database:** MongoDB
-

Features Required

1. Create Note

Users should be able to create a new note by providing:

- Title
- Description

The note must be stored in the database.

2. Read Notes

- Display all notes in a list format.
 - Each note should include:
 - Title
 - Description
 - Created Date
-

3. Update Note

- Users should be able to edit an existing note.
 - Changes must be updated in the database and reflected in the UI.
-

4. Delete Note

- Users should be able to delete a note.
 - The UI should update immediately after deletion.
-

5. Search Notes 🔍

- Implement search functionality based on the note title.
 - Can be implemented:
 - Client-side (filtering)
 - OR Server-side (API query)
-

6. Loading States ⌚

- Show appropriate loading indicators while:
 - Fetching notes
 - Creating a note
 - Updating a note
 - Deleting a note

Deliverables

Candidates must submit:

- 🔗 **Deployed Application Link**
- 💻 **GitHub Repo Link**
