Professional Summary

Third-year Computer Science undergraduate (CGPA: 8.73/10) with hands-on experience in building full-stack web applications, real-time monitoring systems, and data-driven platforms. Strong foundation in frontend engineering, backend API development, and scalable system design through industry training and academic projects.

Education

Bennett University, Greater Noida, India

Bachelor of Technology in Computer Science (AI/ML Minor)

Relevant Coursework: Database Systems, Operating Systems, Software Engineering

Aug 2023 – Present

CGPA: 8.73/10

Technical Skills

Programming & Scripting: Go, Python, JavaScript, TypeScript, SQL, HTML, CSS, C++

Frameworks & Libraries: React, FastAPI, Django, Express.js

Databases & Cloud: MySQL, MongoDB

Tools & DevOps: Git, GitHub Actions

Experience

Frontend & Backend Developer (Trainee)

Jun 2025 – Aug 2025

Research Design & Standards Organisation (RDSO), Indian Railways — Lucknow, India

- Designed and implemented backend services to ingest, validate, and process 1,200+ real-time telemetry signals per cycle, ensuring 99.7% data integrity under continuous data streams
- Built RESTful APIs for querying braking metrics, fault events, and historical train data, with structured error handling and input validation.
- Collaborated with 6+ railway engineers and peer developers to translate official railway safety standards into scalable software modules, cutting deployment time by 30%.
- Improved overall system responsiveness by 20–25% through frontend rendering optimization and backend data-flow tuning, reducing page load times from 2.8s to 2.1s.

Projects

Learn Loop 🌐 — AI, EdTech, Full Stack Development

April 2026

- Developed an AI-powered learning platform that generates flashcards, summaries, and flowcharts from study materials.
- Summarizes the youtube video and automated content extraction to convert raw data into structured learning modules.
- Built an interactive UI for personalized learning with features like spaced repetition, quiz generation, and progress tracking.
- Enhanced user learning efficiency by combining AI-driven insights with adaptive study workflows.

AI Code Fixer — Automated GitHub Code Review and PR Generation System 🌐

Mar 2026

- Developed an AI-powered system that analyzes GitHub repositories, detects bugs and bad coding practices, and generates automated fixes using LLMs.
- Integrated GitHub APIs to fetch repository files, create branches, commit AI-generated fixes, and automatically raise pull requests.
- Implemented GitHub OAuth authentication enabling secure access to user repositories and personalized code analysis.
- Tech Stack: Node.js, Express.js, React, GitHub REST API, OpenRouter AI (LLMs)

Leadership & Activities

- Participated in 5+ national and intra-college hackathons, delivering end-to-end software solutions under strict time constraints.
- Advanced to Round 2 of Smart India Hackathon (SIH), with the team ranked among the Top 100 at the college level.
- Collaborated in 3–5 member cross-functional teams to ideate, build, and present functional software prototypes.
- Actively explored emerging technologies through project-based learning and competitive development environments.
